

GINA Software announces key collaboration with Garmin

Thanks to strategic relationship between Garmin and GINA Software, thousands of humanitarians working in the world's most challenging environments can be better protected by using Garmin's inReach personal satellite communicators connected into GINA Central resource coordination platform.

13th September, BRNO – [GINA Software](#), a leading global security management solution, is pleased to announce a strategic relationship with Garmin® International, Inc., a unit of Garmin Ltd. (NASDAQ: GRMN), bringing [Garmin inReach®](#) satellite communication devices to its GINA Central modern security management tool. The collaboration establishes a comprehensive crisis communication framework that helps companies safeguard staff and assets while coordinating teams and exchanging crucial information in some of the world's most challenging environments.

"We at GINA are constantly working to provide best-in-class innovative solutions to security management teams across the globe," said Vaclav Pizl, GINA Chief Sales Officer. "By bringing inReach's extensive satellite communication capabilities to GINA's command and control tool, organizations can help ensure the safety and of their staff and assets while responding to humanitarian crises and disasters in real time."

GINA will leverage inReach's compact and reliable personal communication capabilities to assist international organizations as they coordinate and respond to a range of crises and disasters including pandemic-related staffing security functions for remote area vaccinations sites, medical convoys, natural disasters, geopolitical conflicts and more.

"Garmin is proud to team up with GINA to create a high-quality, reliable system that brings the benefits of inReach communication devices to organizations as they work to stabilize crisis regions around the world," said Scott Marquis, Garmin inReach Pro sales manager.

About GINA

International and non-governmental organizations ensuring help during humanitarian crises and disasters happening all over the world use GINA as a solution for security management, protection and localization of people important for managing their missions. Thanks to unique combination of available technology is GINA ideal tool for security and coordination in conflict areas, tens of thousands of workers helping in the most dangerous places all over the world are better protected. The system directly impacts the people's security and coordination; involves more than 250,000 active users in 50 countries of the world. Among GINA's customers, there are organizations employing more than 20,000 people who are equipped with radio devices, trackers or mobile devices connected to the system. These people are informed about security risks and coordinated by GINA operators.

About GINA Central

[GINA Central](#) is designed to provide public safety organizations and humanitarian organizations with a command & control tool. GINA System is a real-time field coordination system which can be used as a unified platform for tracking, security management and field staff coordination. The main goal of GINA is to improve the efficiency of both daily and large-scale operations using technology in order to minimize the damages and prevent any casualties. The ultimate tool for reaching this goal is an interactive map which provides a constant real-time visibility of all units on top of dynamic situational data and variety of map bases. This gives the commanders rich data set for their well-informed decisions.
